MetaMap Speed

We periodically run a test collection of 892 MEDLINE title/abstracts (1.23MB of text) on a lightly loaded 2.67 GHz processor running Red Hat Enterprise Linux 6.0 with 48GB memory.

This processing using MetaMap2016V2 with default command-line options typically takes about 40 minutes (≈ 22 citations/minute).

The collection of 892 citations is available [here](#).
